GTM Playbook

Ambition for Korea · Fill in on the day, once the mission and MVP are defined

0. Inputs

Mission · Problem · MVP. Every step below derives from these three.

1. ICP (Ideal Customer Profile)

Derived from the problem and the product: who feels the pain most and can pay.

- Segment, persona and context (when the problem appears)
- Current workaround and why it fails
- Willingness to pay and where they gather
- B2B only: industry, company size, decision maker vs. user

2. USPs (2–3)

Built from the ICP's pain vs. alternatives. Template: *For [ICP] who [pain], we [benefit], unlike [alternative], because [proof].*

3. Channels

Where the ICP already is. Pick 1–2 we can actually test.

- B2C: app stores, creators, communities, referrals
- B2B: LinkedIn outbound, partners/resellers, marketplaces, events

4. AARRR

One metric + one tactic per stage.

- **Acquisition**: where users come from
- **Activation**: the "aha" moment
- **Retention**: why they come back
- **Revenue**: pricing model
- **Referral**: why they invite others

5. Validation

- **B2B → PoV (Proof of Value)**: success metric agreed with the customer, 2–4 week pilot, baseline vs. result, ROI, path to paid contract
- **B2C → Continuous improvement**: cohort retention, A/B tests on onboarding and paywall, review mining, weekly build–measure–learn loop

6. Market sizing

TAM / SAM / SOM. Revenue = reachable customers × conversion × price. Label every number as **fact**, **evidence** or **hypothesis**.

7. Investment roadmap

- **Angel / Pre-seed**: team, problem, prototype
- **Seed**: early traction and PMF signals (retention, first revenue)
- **Series A**: repeatable growth and unit economics (CAC vs. LTV)

Research sources (starting point)

- Market size: Statista, Straits Research, Grand View Research
- App revenue/downloads: Sensor Tower, Appfigures, Business of Apps
- Startups/funding: Crunchbase, Dealroom, CB Insights
- Demand signals: Google Trends, Similarweb, App Store/Google Play reviews, Reddit
- Macro/consumer data: OECD, World Bank, Pew Research
- Research: Google Scholar, PubMed

Not exhaustive. The right source depends on the question, so rethink it before each research task (e.g., Spain's public tender database for a B2G question).
